Software Engineer

Experienced Ruby on Rails and JavaScript based programmer with a background in accounting and customer service. Passionate about breaking down computers both software and hardware into pieces, and putting them back together like puzzles. Skilled at problem solving, debugging, creative design and helping tech companies develop and improve the quality and style of their applications. If I am not programming, I am Traveling the world and blogging about it.

TECHNICAL SKILLS

JavaScript, React, Redux, Ruby, Ruby on Rails, HTML, CSS, Bootstrap4, SQL and Postgres

TECHNICAL PROJECTS

MyActivities FrontEnd: Github| BackEnd: Github | Demo
A Web App that enables Users to create or find Activities in their City or abroad and be able to chat with others who are interested in the same activities.
- Ruby on Rails RESTful API & Postgresql for database
- Implemented for Frontend user interface & state management
- Google Maps Api for location & Web Sockets to enable chat & Material Ui, FlexBox and Custom CSS for styling
- Utilized User Authentication using JWT and Tokens to enable access to the right pages and information.

TravelFrog - Github | Demo
Travel social media website that allows users to connect based on specific destinations. Each city page contained useful traveller information such as current weather, flight prices, currency and city summary
- Integrated Multiple APIs to dynamically display City's summary using Wiki API, current weather and prices for flights using Airport and flights API.
- Ruby on Rails RESTful Api & Postgresql for database
- Used BootStrap for styling

Air Patrol - Github-Front-End | Back-End
A game illustrates the impact on the environment when trees get cut down and how that affects the atmosphere. The player has to make tough decisions to keep the balance of the air quality under control. The shifts in weather and temperature will play a huge part in their decisions. The player will succeed the game by keeping the carbon dioxide level lower or equal to the oxygen level, and based on how many trees in the forest are still remaining.
- Ruby on Rails RESTful Api & Postgresql for database.
- Utilized User Authentication using Local Storage to enable access to the user.
- Implemented for Frontend user interface using React.
- Used BootStrap, FlexBox and custom CSS for styling.
